

**Benefits of
Chemical Etching**

Identification numbers and logos can be etched onto parts, no need for post laser marking

Material properties remain unchanged temper of material is not altered

Exceptionally accurate tighter tolerances

Soft tooling

Complexity of design not an issue

Burr free

No metal stress or part deformation

Low cost digital tooling

Short lead times

Ultimate net shape machining reducing the need for traditional finishing

Fine detail can be achieved

Excellent for prototypes

Stress free

No hard tooling

Flexibility in design

No work hardening

Exotic materials can be etched

Variety of different materials and thicknesses can be etched
