

Advanced Chemical Etching's management recognise the need to comply with the European Regulation 1907/2006 on **Registration, Evaluation, Authorization, and restriction of Chemicals (REACH)** entered into force on June 1, 2007.

In recognition of this commitment, Advanced Chemical Etching has produced a statement, which is intended to keep its customers informed of progress regarding REACH.

STATEMENT

The company has appointed a REACH controller in order to oversee implementation of compliance with regulations.

Advanced Chemical Etching Ltd specialises in the manufacture of chemically etched metal components in a wide variety of thin metals and finishes and is classed as a downstream user, therefore, does not have registration obligations under REACH. However, we will ensure that our suppliers of chemicals, metals, and other preparations used in our processing have been registered by The European Chemicals Agency (ECHA) in order to satisfy REACH regulations.

We can further confirm that at the time of this statement, none of the items registered on the ECHA candidate list of SVHC's updated on the 19th January 2021 are used during production of or supplied in parts manufactured by Advanced Chemical Etching.

Signed

Jayne Powell
REACH Controller
